

Project Report - Content Orchestrator

Date: July 21, 2026 Status: Complete - Milestone 2 fully on GitHub

The Goal

Replace the old placeholder code with the approved Milestone 2 foundation and push it to GitHub - without losing any history.

What Is on GitHub Now

Repository: github.com/royalindustry94-crypto/Content-orchestrator (branch: main)

- apps/api - FastAPI backend (user accounts, workspaces, memberships, database)
- apps/web - React web app
- apps/worker - background worker (will process video pipeline jobs later)
- database, docs, n8n, packages - supporting folders
- CI file (.github/workflows/ci.yml) - GitHub auto-runs tests on every push
- All previous commits preserved - nothing force-pushed or deleted

Problems Hit and Fixed

1. Replit's built-in GitHub connection was broken (expired credentials), so every push failed at first.
2. Switched to a personal access token you created on GitHub.
3. First token was read-only; second could push code; third added the 'workflow' permission needed for the CI file.
4. A branch mix-up from earlier debugging was found and corrected.

Where Things Stand

- Local project and GitHub are 100% in sync.
- Milestone 2: done and delivered.
- Milestone 3: not started, awaiting your go-ahead.
